#### ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 03 02 6574

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.

## ABSTRACT / ZUSAMMENFASSUNG / ABREGE

03026574.8

A nonreciprocal circuit device and a communication device having a nonreciprocal circuit device in which each end portion of each center electrode (22) in the bottom layer of a multilayer-electrode structure on a surface of ferrite (20) is thickened by forming a filled-in electrode (25A) in an opening in first and second insulating films on the upper surface of the end portion of the center electrode in the bottom layer. Each end portion of each center electrode (21) in the second layer is thickened by forming a filled-in electrode (25B) in an opening in the second insulating film on the upper surface of the end portion of the center electrode in the second layer. Each end portion of each center electrode (23) in the top layer (third layer) is thickened by forming a filled-in electrode (25C) in an opening in the second insulating film on the lower surface of the end portion of the center electrode in the top layer.
